Self Narration:

1. I felt like the only issue I had with Task 1 was that the text was only showing up in the console so I moved some things around and what fixed it for me was moving the script portion down to the body.
2. As for Task 2, I had a lot of trial and error. I already had this text box with lyrics so I decided to add a function where the buttons actually serve a purpose. I realized the first iteration of the play button I had named display in the past but to make a clear distinction between forward and backward I had to rename some things. I just played around with a bunch of things and admittedly had to search some things up as it was beyond my knowledge but I ultimately had a fun time working on this project.
3. Similar to the other labs we both were just doing our own individual projects and communicating if needed. I think we both had little to no issues that required us discussing it so it was not really a collaborative assignment but that's ok.
